HUSSEIN ABOZINA

AI-Native Mobile Software Engineer | Flutter · iOS · Android

Egypt • abozina50@gmail.com • +20 102 747 3359

Portfolio · Projects · LinkedIn · GitHub

PROFESSIONAL PROFILE

Mobile Software Engineer with 5 years of hands-on Flutter development, including 2+ years in a professional software-company environment. Built or contributed to 20+ mobile applications across marketplace, delivery, booking, commerce, finance, healthcare, utility, and service domains. Strong production experience with Flutter/Dart, plus hands-on native iOS development with Swift/SwiftUI and native Android development with Kotlin/Jetpack Compose. Experienced across REST APIs, Firebase/Supabase, payments, maps/location, notifications, chat/realtime flows, CI/CD, debugging, release management, and App Store/Google Play delivery. Works AI-native: spec-driven development and context engineering with Claude Code, OpenAI Codex, Cursor and ZCode, with every change reviewed and verified before it ships. Also brings custom backend ownership on an end-to-end project.

CORE CAPABILITIES

Flutter & Mobile: Flutter, Dart, Android, iOS, responsive/adaptive UI, animations, Arabic/English RTL/LTR
AI-Native Engineering: spec-driven development, context engineering, requirements decomposition, acceptance criteria, agentic implementation in small bounded tasks, error anticipation, code review, verification gates
AI Coding Agents: Claude Code (Claude Opus / Sonnet), OpenAI Codex (GPT Codex models), Cursor (Composer + frontier models), ZCode (GLM)
Native iOS: Swift, SwiftUI, app state, local persistence, reminders, auth/sync integrations, feature-oriented architecture
Native Android: Kotlin, Jetpack Compose, Gradle, Room/repository foundations; active hands-on development
Architecture: BLoC, Cubit, Provider, Clean Architecture, MVVM/MVC, OOP, SOLID, dependency injection
APIs & Data: REST APIs, Dio, Retrofit, JSON, authentication, Firebase, Supabase, Hive, SQLite, SharedPreferences
Integrations: Payments, Google Maps/GPS/location, push notifications, chat/realtime product flows
Quality & Delivery: Debugging, performance optimization, unit/widget testing, Git/GitHub, CI/CD, Play Store, App Store, build/version management

PROFESSIONAL EXPERIENCE

Flutter Developer - Efadah Company for Software | May 2024 - 2026

- Built and maintained cross-platform Flutter applications for Android and iOS across marketplace, delivery, booking, e-commerce, event, beauty-service, and utility products.
- Integrated REST APIs and third-party services including payment gateways, Firebase Cloud Messaging, Google Maps, GPS/location services, and realtime communication flows.
- Structured features with BLoC/Cubit/Provider, Clean Architecture, OOP, SOLID, and dependency injection, while translating product requirements and designs into maintainable mobile features.
- Owned release work across build/version management, signing, Google Play and Apple App Store submission, review fixes, and post-release maintenance.
- Collaborated with designers, backend developers, QA, and product stakeholders, and used AI-assisted engineering workflows to accelerate implementation while reviewing and verifying output quality.

Independent & Portfolio Mobile Development | 2021 - Present

- Built and refined mobile products and engineering showcases across Flutter, native iOS, native Android, and backend-connected workflows.
- Developed at least one end-to-end project with custom backend ownership, alongside public showcase projects focused on architecture, visual implementation, CI, testing, and release readiness.
- Run AI coding agents (Claude Code, Codex, Cursor, ZCode) as an engineering multiplier: write the spec and acceptance criteria, engineer the context, anticipate likely errors, review generated code, and verify results before accepting changes.

SELECTED PROJECTS

NOVA - Fashion Commerce Mobile Experience | Public Engineering Showcase

- Built a connected Flutter commerce flow covering discovery, product variants, wishlist, bag, checkout, Firebase-backed account behavior, and MyFatoorah sandbox payment handling with a polished public presentation.

Offer Deal - Marketplace, Payments & Realtime Chat | Production / Published

- Implemented marketplace listings and offers, browsing/filtering, buyer-seller chat, order flows, tracking, notifications, and payment integration across a production mobile experience.

Talabiat - Delivery, Maps & Order Tracking | Production / Published

- Built pickup/drop-off and order workflows, provider/customer communication, Google Maps/GPS location handling, route tracking, notifications, and delivery-status updates.

Brees - Personal Finance Flutter Showcase | Public Engineering Showcase

- Implemented a complete 60-state Flutter product journey with Clean Architecture, motion, automated visual QA, CI, and a public live portfolio/APK demonstrating disciplined design-to-code execution.

Task Management Native - SwiftUI + Kotlin/Compose | Native Mobile Engineering Project

- Built a native mobile codebase with a substantial iOS Swift/SwiftUI implementation and an Android Kotlin/Jetpack Compose track. iOS includes task/project flows, calendar, reminders, local persistence and Supabase sync foundations; Android includes Compose, domain contracts, Room/repository work and build tooling, with the Android track still under active development.

EDUCATION & LANGUAGES

Bachelor of Computer Science - Mansoura University (2019-2022)

Arabic: Native • English: Professional Working Proficiency
